

I am concerned with the changes the Federal Communications Commission is now considering making to the way FM radio is heard. The new broadcast service known as Low Power FM proposed to expand would take priority over current FM translator service. This would eliminate the station myself & my family always listen to. I listen to Air1 on 90.1 fm. This station is a positive, uplifting influence for my family and my community. In these times of national and international turmoil, it is a comfort to know my radio station is always a safe place. Air1 provides an irreplaceable service to my community and all communities it broadcasts to by offering a safe broadcast. The positive effects this station has on all who listen to it is immeasurable. The effects of losing this broadcast is measurable. The positive changes to negative lifestyles would be lost. The positive influence on young lives would be lost. The life affirming message in each and every song on Air1 is irreplaceable. Please consider the negative effects on the American public when making your decision. Thank you.
